populate

automatic placement for arquitree Revit families

arquitree populate is a free Dynamo package that works with arquitree families; it contains several scripts taht allow you to automate the placement of vegetation, cars and figures.

In each script you will find different parameters for customization like scalability (vegetation), plants with or without planters, lights on/off (cars) and more. It can be downloaded directly from Dynamo inside Autodesk Revit.

All arquitree families work with Autodesk Revit 2017 or later.

They are custom made to provide you a smooth workflow and to bring realism into your projects. The families have different parameters that will allow you to easily customize them like: scalability, visibility parameters, dimensional parameters, etc.

To learn more about arquitree populate, arquitree families and how to use them please follow us on our social media platforms.
